ARTISAN METHODS

MONTART CREATION uses the filgood **type wooden stretcher** (copyright Bonfil company), as the fitting area is much more resistant than the one of the Spanish and European type stretcher.

Our company is known and appreciated for the use of quality wood which receives adequate treatment in order to avoid any attack of fungi or other insects during the lifespan of the stretcher. We use **100% natural linen canvas** of the taffeta and close weave type, since this is the fabric that undergoes less change during lifespan caused by environmental/atmospheric humidity. Furthermore, our fabrics receive special attention so as to be protected against attacks of fungi that could harm them with the time. For the fitting **stainless steel staples** are used in order to avoid oxidation.

MONTART CREATION uses the "recipe" (method) of the great masters of the Italian Renaissance, i.e. combines the natural ingredients of the know-how with other chemical ingredients that guarantee the quality of **preparatory layer**, so avoiding its putrefaction. Continuous layers of different quantity of adhesive and load are applied until found the appropriate surface. The use of the natural "recipes" of the great masters is necessary to guarantee the adhesion of the paint to the ground layer and so avoiding possible detachments.

¹ 1 cm = 2,54 inch

² Price is in Euros and tax, transport or insurances are not included. These stretched canvases are not sold in shops.
